NOTES		

Timber processing and mills includes all timber processors and mills that draw all or a portion of their timber resource from the Brigalow Belt South Bioregion. The number of businesses includes all business or business enterprises from a specific town that use resources from this State Forest. Where given, and with the exception of apiary businesses, the number of full time employees is the total number of employees in the business as reported in the survey of forest businesses. Full-time, part time and casual employees are each identified as an employee. For apiary businesses the number of FTE employees per business is estimated on the basis of the survey of forest businesses and is estimated as 1.8 FTE employees (inc. owner) per business. In several instances the number of employees is unknown or unable to be estimated.

Quarry or mine site (unprocessed construction materials)	1	Unknown
NOTES		

Timber processing and mills includes all timber processors and mills that draw all or a portion of their timber resource from the Brigalow Belt South Bioregion. The number of businesses includes all business or business enterprises from a specific town that use resources from this State Forest. Where given, and with the exception of apiary businesses, the number of full time employees is the total number of employees in the business as reported in the survey of forest businesses. Full-time, part time and casual employees are each identified as an employee. For apiary businesses the number of FTE employees per business is estimated on the basis of the survey of forest businesses and is estimated as 1.8 FTE employees (inc. owner) per business. In several instances the number of employees is unknown or unable to be estimated.

NOTES		

Timber processing and mills includes all timber processors and mills that draw all or a portion of their timber resource from the Brigalow Belt South Bioregion. The number of businesses includes all business or business enterprises from a specific town that use resources from this State Forest. Where given, and with the exception of apiary businesses, the number of full time employees is the total number of employees in the business as reported in the survey of forest businesses. Full-time, part time and casual employees are each identified as an employee. For apiary businesses the number of FTE employees per business is estimated on the basis of the survey of forest businesses and is estimated as 1.8 FTE employees (inc. owner) per business. In several instances the number of employees is unknown or unable to be estimated.

- National Parks State Forests

HELP : INTRODUCTION

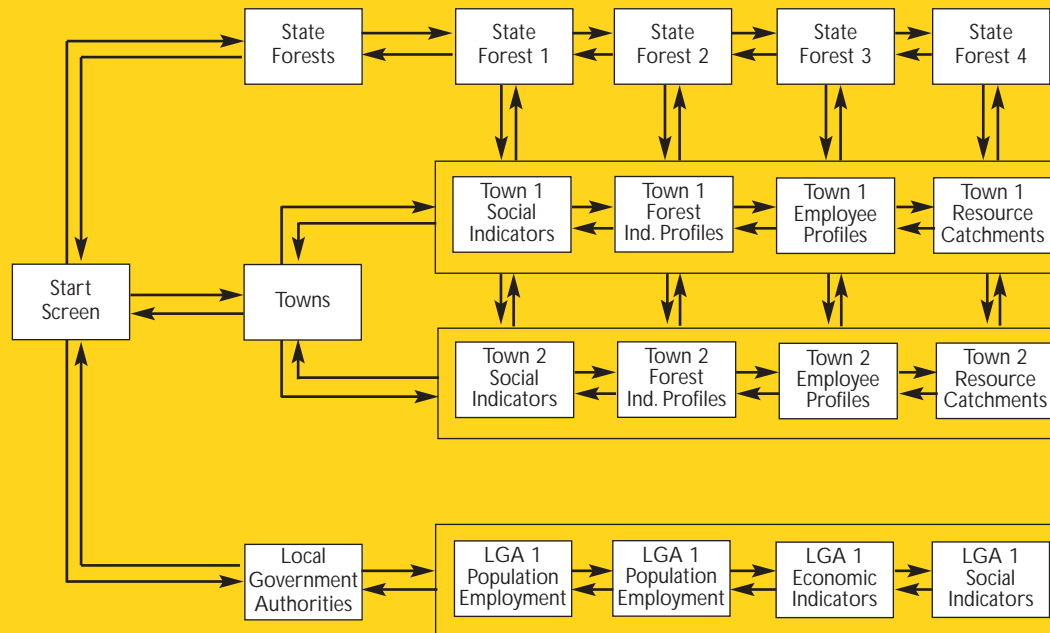

Navigation

The information in this database can be accessed through three entry points, which are (i) State Forests, (ii) Towns and (iii) Local Government Authorities. The diagram below shows the navigation structure and information provided in the database.

When navigating through the database, information on Local Government Authorities within the region is included in a separate search path to information on State Forests and towns. In the case of State Forests and towns the search paths are connected such that one can identify those towns dependent upon forest resources from specific State Forests. Furthermore the database also allows the user to move through a search path which links specific towns.

The diagram below is a simplified presentation of the data which shows only four State Forests and two towns. The database and interconnected search paths are based on 82 State Forests, 5 National Parks and 50 towns in the region. Given the complexity of the database in this version, the user may find the use of the BACK control button fails and the user will be required to move to HOME.

Throughout the database names of towns and State Forests that are underlined may be selected as part of the search path.

HELP : STATE FOREST AND NATIONAL PARK SELECTIONS

Selection of State Forests or National Parks

This panel shows State Forests and National Parks in the region. Only those State Forests and National Parks are displayed where there is information available on their use.

The user may select a single State Forest or National Park from the list of State Forests and National Parks on the right of the panel. In addition the user may select a State Forest by moving the mouse cursor over areas of State Forest on the map. If the cursor changes to a pointing finger and is stationary the name of the State Forest will also be displayed.

HELP : TOWN SELECTIONS

Selection of Towns

This panel shows towns in the region. The towns that are displayed include all major towns in the region, those towns for which census information is available and towns in which specific forest industries and businesses are located.

The user may select a single town from the list of towns on the right of the panel. In addition the user may select a town from the map on the panel.

HELP : LOCAL GOVERNMENT AUTHORITY SELECTIONS

Selection of Local Government Authorities

This panel shows Local Government Authorities (LGAs) in the region. The LGAs that are displayed include those LGAs that have a significant portion of their area within the boundary of the bioregion.

The user may select a single LGA from the list of LGAs on the right of the panel. In addition the user may select an LGA from the map on the panel.

State Forests and National Parks

This panel provides information on the use of a specific State Forest or National Park. Forest users that have been identified include (i) timber mills, (ii) timber contractors (including harvesting and haulage), (iii) apiary and (iv) grazing.

Timber Mills

In relation to timber mills, 12 timber mills located in the region or in close proximity to the boundaries of the region that draw a portion of their timber resource from State Forests in the region have been included. The specific State Forests used by the timber mills was identified in survey research with the timber industry, where each timber mill was asked to identify the State Forests from which timber resources were obtained within the last year. The panel indicates the number of timber mills from a specific town that use the resource and the total employment (fulltime, part-time and casual) by timber mills from that town.

Timber Contractors

The location of State Forests used by timber harvesting and haulage contractors during the last 12 months was undertaken through survey research with contractors. Timber contractors in the region were identified through information supplied by NSW State Forests, timber mills in the region and other timber contractors. As there is no list of all timber contractors in the region it may be the case that several contractors have not been contacted and included in the analysis. As such information on the use of State Forests has been derived from 21 timber contracting businesses and individuals. The panel indicates the number of contractors from a specific town that use the resource and the total employment (fulltime, part-time and casual) by contractors from that town.

Apiary

The location of State Forests used by apiarists has been identified through information on permit holders supplied by State Forests. Given the permit system for apiary use on State Forests it is possible that not all apiarists using State Forests have been included. The current database includes information on the location of use for 138 apiary businesses. For apiary businesses the number of full-time equivalent employees per business is estimated on the basis of the survey of forest businesses to be 1.8 full-time equivalent employees (inc. owner) per business.

Grazing

The location of State Forests used by grazing businesses has been identified through information supplied by State Forests. This information has been supplied for 97 separate grazing businesses. The survey response for grazing businesses was very low and as such it is not possible to identify employment associated with individual grazing businesses.

Other Uses

Databases supplied by State Forests in some cases also listed other uses of State Forests (ie., tourism, basic raw material extraction). In addition, the Department of Mineral Resources has supplied information on operating quarries, quarry resources, and industrial mineral sites located in State Forests within the region.

Social Profiles

Census information from the 1996 census was used as the basis for identifying specific socio-demographic profiles. At the time this database was being developed limited census information was available from the 2001 census. Each panel has been designed so as to allow the inclusion of additional census information when it becomes available.

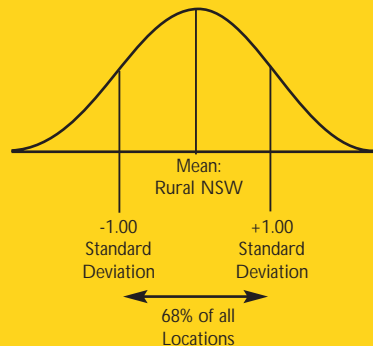

Twenty-three core social and demographic profiles are shown each with a value from the 1996 census and where possible census values from the 2001 census are also given. The table below shows each profile and its definition.

Number of Occupied Private Dwellings	The number of occupied private dwellings on census night 1996
Resident Population	Resident population/Number of occupied private dwellings
Occupancy Rate	As a percentage of all private dwellings
Percent Rental Accommodation	As a percentage of all private dwellings
Percent Being Purchased	As a percentage of all private dwellings
Percent Fully Owned	As a percentage of the total resident population
Percent Aged 14 and Below	As a percentage of the total resident population
Percent Aged 15 to 64	Above As a percentage of the total resident population
Percent Aged 65 and	The number of persons (below 14 and above 65 years to every 100 persons of working age (15-64 years of age)
Dependency Ratio	The number of all unemployed persons expressed as a percentage of the workforce.
Unemployment Rate	The number of unemployed persons between 15 and 19 years of age expressed as a percentage of the workforce aged between 15 and 19 years of age.
Unemployment Rate (15-19 year olds)	The number of unemployed males between 25 and 44 years of age expressed as a percentage of the male workforce aged between 25 and 44 years of age.
Unemployment Rate (males 25-44 years)	The number of persons in the labour force expressed as a percentage of the total number of persons aged 15 years and over
Workforce Participation Rate	Percentage of all one family households with a weekly household income less than \$299
Weekly Family Income Less than \$299	The number of all separated and divorced persons expressed as a percentage of all persons over 15 years of age.
Percent Separated or Divorced	The number of persons who left school less than 15 years of age or never attended as a percentage of all persons over 15 years of age.
Percent Left School Aged Less than 15 Or Never Attended	The number of persons aged 15 years and over with no qualification as a percentage of the number of people aged 15 years and over.
Percent Aged 15 years and Over With No Qualifications	The number of one parent families in occupied private dwellings as a percentage of all families in occupied private dwellings
Percent One Parent Families	The number of one family households with no vehicles as a percentage of all occupied private dwellings
Percent of One Family Households with no Vehicle	The number of labourers and related workers as a percentage of all employed persons
Percent of Labourers and Related Workers	The number of persons indicating Aboriginal, Torres Strait Islander or both Aboriginal and Torres Strait Islander origin as a percentage of all persons
Percent Aboriginal and Torres Strait Islanders	The number of persons employed in industries defined as agriculture, forestry or fishing as a percentage of all employed persons
Percent Employed in Agriculture, Forestry and Fishing	

HELP : SOCIAL PROFILES

Social Profiles

The value for each demographic profile was also transformed into a standard score using a Z-score transformation, with a mean equal to zero and standard deviation of 1.00. Profiles within plus or minus 1.00 standard deviation of the mean, are generally considered 'average'. Scores less than -1.00 standard deviation below the mean may be considered 'below average', while scores greater than +1.00 standard deviation above the mean may be considered 'above average'.

In addition to displaying specific social profiles for a region, each panel also displays four summary indicators. Each of the four community sensitivity indices consist of correlated social indicators which have been used to describe each index.

Unemployment and Income

Total unemployment
Unemployment (25-44 years)
Weekly family income <\$299

Education and Occupation

Left school before 15 Years
Percent over 15 years with no qualifications
Percent labourer or related workers

Family and Housing

Percent dwellings rented
Percent families with no vehicle
Percent separated and divorced
Percent of one parent families

Age Dependency

Percent aged 14 years or less
Percent aged 65 years or greater
Dependency ratio

Each panel reports a simple Total Sensitivity to Change Index which is the percentage of scores for specific social profiles which exceed a standard deviation of 1.00 in a negative direction. As such higher scores indicate less resilience to change, while lower scores indicate greater resilience to change. The table on the right shows the Total Sensitivity to change Index for all towns in the region.

Town	Score
Pilliga	82.3
Aberdeen	76.5
Boggabilla	76.5
Carroll	76.5
Boggabri	64.7
Wellington	64.7

Tamworth	5.9

HELP : FOREST INDUSTRY AND LOCATIONAL PROFILES

Forest industry and locational profiles are presented for specific towns where there is sufficient information available. The information presented in this panel is based on surveys of forest users in the region.

Timber and Forest Industries

This is a count of the number of timber and forest industries located in the town. The information is derived from survey research and from information supplied by State Forests of NSW.

Sample Survey Counts

This is a count of the number of business surveys completed by forest businesses located in the town. In addition the table shows the number of forest business employee surveys that have been completed by employees of forest businesses who are resident in the town. It is possible in some cases for employees to work in a business that is located in a different town to which they reside. This information is useful in describing the sample counts on which information about forest businesses and employees in the town is based.

Timber Industry Employees

This table provides a count of the number of employees of timber mills located in the town. The table also shows the percentage of the total regional mill employment in the town. In estimating full-time equivalent employment, 0.5 is used for part-time and casual employment.

Industry Expenditure

For all forest businesses located in the town this table shows the percentage of total expenditure occurring within the town and to all other towns in the region. This table is useful in showing how changes to forest industries in the town may possibly impact on other town locations.

Industry Sales

This table shows for all forest businesses, including timber mills, the town location of sales and the percentage of sales income to other locations. Again this table is useful in showing how changes to forest industries in the town may possibly impact on other town locations.

Household Expenditure

All employees of forest businesses located in the town who completed the survey were asked to indicate the town location of their household expenditure and the percentage of their total household expenditure occurring at the location.

Town Location of Employees

For those forest businesses located within the town, this table shows the town location of employees. As might be expected in the majority of cases employees will be resident in the same town as the business, however in several instances the business location and employee residential locations are different.

Family Member Employment

This table shows for all employees of forest industries resident in the town, the town location in which other members of their family are employed.

Family Use of Schools

This table shows for all employees of forest industries resident in the town, the town location in which children attend school.

Use of Community Groups

This table shows for all employees of forest industries resident in the town, the town location of community groups they attend or participate in.

HELP : EMPLOYEE PROFILES

This panel includes the social profiles of all selected forest industry employees that are resident in the town. Where the sample size is sufficiently large information is provided on employees within a specific forest industry and comparative information is given on the regional social profile for that industry.

Aboriginal and Torres Strait Islanders

All employees were asked, "Do you identify yourself as an Aboriginal or Torres Strait Islander?"

Additional Employment

All employees were asked, "Do you currently have another job in addition to the one in the forest industry?". If so, they were also asked, "On average during the past year how many hours per week did you work in your other job?"

Housing Tenure

Each employee was asked whether they rented, had a mortgage or owned the home in which they were now living. Comparisons with NSW state census data for 2001 show that 29.9% rent, 25.3% have a mortgage and 44.8% own their own home.

Highest Level of Education Achieved

All employees were asked to indicate the highest level of education they had achieved. While the panel enables comparisons to be made with regional profiles the NSW state census data for 2001 shows the percentage of the population over 15 years of age achieving the highest year grades: Year 8 (11.1%), Year 9 (9.5%), Year 10 (30.3%), Year 11 (6.1%) and Year 12 (43.0%).

Family Composition

Mean family size is shown and can be compared to a mean sample size of 3.0 for NSW (ABS, 2001). Where the town contains timber mill employees and estimate is also given of the population of mill employees and family members in the town.

Age Dependency Ratio

The age dependency ratio is the number of dependent persons (under 14 years and over 65 years) to the number of persons of working age (15 to 64 years). The age dependency ratio is calculated across all employees and family members and can be compared to the NSW State age dependency ratio of 51.0 (ABS, 2001).

The Elderly Dependency Ratio

The elderly dependency ratio is the number of elderly persons (over 65 years) to the number of persons of working age (15 to 64 years). The elderly dependency ratio is calculated across all employees and family members and can be compared to the NSW State elderly dependency ratio of 19.8 (ABS, 2001).

The Child Dependency Ratio

The child dependency ratio is the number of children (below 14 years) to the number of persons of working age (15 to 64 years). The child dependency ratio is calculated across all employees and family members and can be compared to the NSW State child dependency ratio of 31.3 (ABS, 2001).

Social Capital

There are numerous indices and measures of social capital. One simple measure is the level of participation in community groups and organisations. Information is provided on the percent of family members active in community groups ("Are you or other immediate family members active members of any social, sport, hobby or local community groups?"); the percent of volunteer activity ("Do you help out a local group as a volunteer?"); the percent of event assistance ("Have you helped organise or run a local community event in the past 6 months?") and percent on management or organising committees ("Are you on a management committee or organising committee for any local group or organisation?").

All employees listed the sport, hobby, community groups and organisations they participated in. The number of persons participating in each type of group is shown in the table.

HELP : RESOURCE CATCHMENTS

Where sufficient information is available, a resource catchment is shown for each town in which forest industries are located. The resource catchment shows the location of those State Forests used by forest industries within the town. In addition, each panel shows the maximum distance between the town and the outer limit of the resource catchment.

As much of the information presented in this database is based on sample data from surveys of forest industries and on the use of State Forests within the last 12 months, it is important to have a broader understanding of the relationship between State Forests and towns in the region. The resource catchment surrounding a specific town indicates that changes in the status or management of State Forests within the resource catchment (maximum distance from the town) may impact on the town and those forest industries within the town.

A significant percentage of resource catchments throughout the region are highly localised and consist of areas of State Forest in close proximity to the town in which the forest industries are located. Where the resource catchment for the town is geographically large, this is often due to a few forest users using State Forests some distance from the town. The table below shows the maximum distance between towns and State Forest used by industries within the town.

Town	Maximum distance from Town to State Forest
Curlewis	17
Turill	19
Bugaldie	20
Eumungerie	21
Yetman	26
Warialda	27
Gwabegar	35

HELP : POPULATION AND EMPLOYMENT CHANGES

This panel shows changes in population between 1976 and 1996 and projected changes in population to 2021

The number of employed persons and employment change is also shown between 1981 and 1996.

HELP : SECTORAL EMPLOYMENT DISTRIBUTION

This panel shows the industry structure of the economy by highlighting how many people are employed in each of the designated industry sectors

HELP : ECONOMIC INDICATORS

Industry Diversity

This is an index with a scale of 0 to 100. It compares the industry structure of the region with that of Australia. A value of 0 is assigned to Australia and 100 would be a one-industry economy. A smaller value indicates a more diversified economy.

Industry Mix

The NSW economy is separated into industries that grow faster or slower than average. The industry mix calculates for the region the percentage of total employment in the faster growing NSW industries. A value greater than 50 indicates that there is more employment in fast growing industries than slow growing industries. The growth measure is the size of the advantage (disadvantage) expressed as a percentage of the 1996 level of employment.

Industry Competitiveness

The proportion of total region employment in industries that grew employment faster than the rate of employment growth for that industry in NSW. That is, the percentage of region employment in those industries that are 'competitive' as indicated by an increase in the employment share of NSW employment in that industry.

The growth measure indicates the net contribution to employment growth made by the mix of competitive and uncompetitive industries. A negative value indicates that industries losing employment share had a larger impact on employment than competitive industries. The size of that net effect is expressed as a percentage of 1996 employment.

Service Delivery

For service industries, the net figure is the change in employment needed to deliver services at the same population : employment ratio as the average for NSW, expressed as a percentage of total region employment. The surplus column shows the amount by which some services are supplied at levels higher than the NSW average while the deficit shows the amount by which some services are supplied at levels lower than the NSW average.

The PER is the average population : employment ratio for the region.

Business Services

This is the level of employment in business services as a percentage of total employment. Business services include transport, communications, banking, finance, insurance, property services, technology and research, legal, accounting and management, and other business services.

Number of Businesses

The number of businesses is obtained from the yellow pages listings of businesses and while it will show changes in the relative numbers of businesses across years, it will also underestimate the number of businesses in the region as many, particularly agricultural businesses, are not included in the Yellow Pages listings. The number of businesses is also based on postcode boundaries which may or may not approximate the boundaries of Local Government Authorities.
