To whom it may concern,

I am a regular visitor to the region and am deeply concerned about the proposed logging to take place here. I am particularly disturbed to hear that it has happened without community consultation and without regard for the protection of the environment.

It is impossible to understand the logic of their action. Tourism is the primary industry that supports these communities. They come here to enjoy the beautiful surroundings and commune with nature. Your actions will destroy their habitat, flora, and fauna and their area will no longer be attractive for tourists now and for generations to come. You are only considering the short term gain, and not the long term pain of these actions. It is immoral and irresponsible to sanction logging in these wonderous ancient forests. The people are fed up with petitions into pay lip service to their constituents. You have a responsibility to represent all of the people and the majority want this area preserved for future generations.

Do the right thing and do your job.

Yours sincerely,
