I don't like what logging does. I've seen it before & it's catastrophic. I've seen this before & I am appalled.
Q18. What parts of the draft Coastal IFOA do you think have a negative outcome on the management of environmental values or the production of sustainable timber? Why?

Once again I don't approve of logging due to the destruction left behind & the habitat loss for all our wildlife. With no concideration & no regard as to ehat is killed in the process.

Q19. What are your views on the effectiveness of the combination of permanent environmental protections at the regional, landscape and operational scales (multi-scale protection)?

I feel very strongly about protecting what little forests & habitat that is still remnent. These are a sanctuary to protect the habitat of our wildlife.

Q20. In your opinion, would the draft Coastal IFOA be effective in managing environmental values and a sustainable timber industry? Why?

No..I don't think that timber is a sustainable product or can be managed appropriately. Governments don't understand nor will they ever be compassionate for our wildlife.
