|--|----------------|
| Q1. First name   | George         |
| Q2. Last name  | Dionyssopoulos |
| Q3. Phone  | [REDACTED]     |
| Q4. Mobile   | [REDACTED]     |
| Q5. Email  | [REDACTED]     |
| Q6. Postcode   | [REDACTED]     |
| Q7. Country  | Australia      |
| Q8. Stakeholder type   | Individual     |
| Q9. Stakeholder type - Other   | not answered   |
| Q10. Stakeholder type - Staff  | not answered   |
| Q11. Organisation name   | not answered   |
| Q12. What is your preferred method of contact?   | Email          |
| Q13. Would you like to receive further information and updates on IFOA and forestry matters?   | Yes            |
| Q14. Can the EPA make your submission public?  | Yes            |
| Q15. Have you previously engaged with the EPA on forestry issues?  | No             |
| Q16. What parts of the draft Coastal IFOA are most important to you? Why?  | not answered   |
| Q17. What parts of the draft Coastal IFOA do you think have a positive outcome on the management of environmental values or the production of sustainable timber? Why? | not answered   |

**Q18. What parts of the draft Coastal IFOA do you think have a negative outcome on the management of environmental values or the production of sustainable timber? Why?**

not answered

---

**Q19. What are your views on the effectiveness of the combination of permanent environmental protections at the regional, landscape and operational scales (multi-scale protection)?**

not answered

---

**Q20. In your opinion, would the draft Coastal IFOA be effective in managing environmental values and a sustainable timber industry? Why?**

not answered

---

**Q21. General comments**

I shall just say that the destruction of native forests in our country and NSW is out of control. Mike Baird as I understand it approved new laws that Weaken the environmental laws and there are thousands of hectares of virgin forests been destroyed for no reason at all. Trees are our lifeline they absorb CO2 and keep the earth and eco systems in balance. Man has gone too far in destroying our forests and I understand that logging for wood is important as well. A balance is important and we need to have much more land for Tree Farming. I grew up in South Africa and been here 24 years. On School excursions of a week at a time we used to go up north from Johannesburg to where they had thousands of hectares of tree farms. We saw the saw mills and how they were running a very good timber industry. There were 5 year old trees and 10 years etc etc up to 20 year old tree farms. They did NOT cut down virgin rain forests and native forests these were tree farms and multi million dollar industries. WE need more of this and I wish for Australia to take a world lead and use the millions of hectares that we have in our beautiful country. warm Regards George
