- Q1. **First name** [REDACTED]
- Q2. **Last name** [REDACTED]
- Q3. **Phone** not answered
- Q4. **Mobile** not answered
- Q5. **Email** not answered
- Q6. **Postcode** [REDACTED]
- Q7. **Country** not answered
- Q8. **Stakeholder type** Individual
- Q9. **Stakeholder type - Other**
not answered
- Q10. **Stakeholder type - Staff**
not answered
- Q11. **Organisation name** not answered
- Q12. **What is your preferred method of contact?** Email
- Q13. **Would you like to receive further information and updates on IFOA and forestry matters?** Yes
- Q14. **Can the EPA make your submission public?** Yes, but anonymous
- Q15. **Have you previously engaged with the EPA on forestry issues?** No
- Q16. **What parts of the draft Coastal IFOA are most important to you? Why?**
Ones that reduce habitat. No forests on public land should be or need to be logged. All timber needs to be plantation sourced. Native species need the very highest protection.
- Q17. **What parts of the draft Coastal IFOA do you think have a positive outcome on the management of environmental values or the production of sustainable timber? Why?**
The idea that native forests can be "sustainably logged" is severely outdated. The only way to effectively protect these forests is to leave them alone.

Q18. What parts of the draft Coastal IFOA do you think have a negative outcome on the management of environmental values or the production of sustainable timber? Why?

The ones that reduce buffers and protections for older trees and faunal habitat.

Q19. What are your views on the effectiveness of the combination of permanent environmental protections at the regional, landscape and operational scales (multi-scale protection)?

These "protections" will not be effective in the long term. Effective protection will only result from the end of forestry logging operations in these highly vulnerable ecosystems.

Q20. In your opinion, would the draft Coastal IFOA be effective in managing environmental values and a sustainable timber industry? Why?

No. See above.

Q21. General comments

Most timber is currently sourced from plantations. It's time to make that 100%. Native forests are too precious to be compromised by logging.
