Thankyou for the opportunity to comment.
Re - Re - Make objectives -

- Use existing legislative framework and enforcement as blueprint for environmental protection and forest use, on public land.

- Harvest only high Quality sawlogs, leave and manage all remaining trees, and ecosystem.

- Current practices are diminishing the resource - a defined resource, with depleted capability to sustain yield, will fail.

- Cutting small trees (150mm round) down to send to chip is setting "back the forest" decades before commercial viability returns.

- The resource is undervalued, as evidenced by poor practice in the industry. Without best practice and management applied it would be difficult to ensure best regulatory practice or enforcement.

Sincerely,
