

Example pesticide use record sheet – vertebrate pest baiting (foxes)

Note: Baiting for foxes and wild dogs involves replacing pesticide baits that have been taken during a control program. As a record must be made on each occasion that pesticide baits are laid or replaced, the example below shows how multiple records can be made on a single page.

It is not mandatory to record the information that is shown in a small font and italics. However, it is recommended that you consider recording this information, as it shows that you have complied with the 1080 pesticide control order. Details on the equipment used to apply vertebrate pest baits are not mandatory, unless the person/s laying the baits holds an EPA pesticide licence. Licence holders should also record start and finish times and the order the baits were laid.
