To whom it may concern,

Thank you for the opportunity to comment on the Clean Air for NSW consultation paper. This is obviously a very comprehensive piece of work and I generally support the planned actions. I would like to add the following suggestions:

a. Cruise Ships. I would think that the provision of shore to ship electricity for cruise ships in Sydney (Balmain and Circular Quay) would be a relatively easy win. Perhaps this could be funded by a levy on visiting cruise ships. Further, ships could be required to comply with the same fuel standards that are imposed on ships visiting ports in the EU or the USA.

b. Fireplaces. Consideration could be given to effectively banning new fireplaces in houses via the BASIX regulations.

c. Coal Health Levy. A levy could be placed on coal and gas fired electricity generators to recover the costs they currently impose on the NSW Health budget.

Kind regards,

David Griffin
